

SCHOOL SAFETY FOR K-12 EDUCATION

According to the National Center for Education Statistics, the United States has a total of 98,577 public schools and 30,492 private schools. When it comes to ensuring school safety, the primary objective is to protect the students and staff from various emergency situations. Creating a secure environment not only fosters a sense of anticipation and enthusiasm among students for their daily activities but also encourages social interaction and promotes creativity. Unfortunately, school safety concerns directly affect the daily attitudes of students and staff, and are sometimes placed lower in priority by some districts due to budgetary or other reasons. However, when a child feels insecure within their educational setting, it can lead to excessive stress, anxiety, a constant state of alertness, and even complete disengagement from schooling. Maintaining the safety of both students and staff and effectively managing security measures can be a complex task. To simplify this process, 911inform has developed user-friendly, browser-based software that streamlines safety protocols and management procedures.

911inform is a notification and emergency management solution providing state of the art tools to effectively mitigate ANY emergency situation. Our platform supports both school administration and emergency services with bi-directional communication and controls needed to successfully manage a crisis and save valuable time. Your on-site security, health professionals, or administration will immediately receive a text and/or email message alerting everyone of an emergency. This opens a direct dialog of instructions while first responders are enroute.

PROVIDE YOUR SCHOOL DISTRICT WITH ...

- **Kari's Law and RAY BAUM's Act Compliance**
- **Alyssa's Law Compliance**
- **Bi-Directional Communication between your district and local public safety**
- **Enhanced Situational Awareness during an emergency**
- **Integrated safety technologies used during an emergency**
- **SIS Integrations to provide enhanced emergency response for student safety**
- **Mass notification capabilities for emergencies and non-emergencies**
- **Digitized floorplans for clear notifications of emergencies**

ALYSSA'S LAW » KARI'S LAW » RAY BAUM'S ACT

ALL THREE SOLVED WITH 911INFORM NG911 CAMPUS SAFETY

Using our easy-to-use mass notification system, we allow the administration to instantly know the who, what, where, and when of any emergency. Your organization assigns permissions for each user list to maintain direction for each notification type. Our notifications provide the location of a call's origin, detailed maps of the premises, real-time communication with on-site personnel (including first responders), and remote control of a building's security systems (i.e., doors, strobes, intercoms, and cameras). With an easy-to-use application, no additional software downloads, or unnecessary equipment, 911inform can help monitor your entire organization.

A 911 call from a cell phone automatically triggers a notification and will display the location on the floor plan using Geofencing technology.

KEY POINTS ON WHY 911INFORM SHOULD BE INCORPORATED INTO YOUR DISTRICT:

1. Immediately alert all necessary security, medical teams, and administration during any emergency using available devices within your campus.
2. Pinpoint emergency locations on detailed, interactive floor plans from facility VoIP and cellular phones dialed anywhere on the property, inside or out.
3. Access all security technology, such as video surveillance and door access controls.
4. Communicate and respond alongside first responders using our real-time comment section. 911inform is embedded in current 911 Call Centers systems and replies immediately.
5. Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment and science labs.
6. Utilize the internal communication system to keep your campus' on-site teams up to date with real-time responses. Report who is on-site, clearly communicate the situation, and resolve emergencies sooner.

ACCESS FREE PANIC BUTTONS FOR YOUR MOBILE DEVICES

- 911 Calling
- Medical Emergency
- Lockdown Building or Entire District
- Silent Alarm
- Active Shooter
- Fire
- Shelter in Place
- Bomb Threat

**All Panic Buttons can be customized to your district's needs.*

911inform is fully customizable to fit the functionality needs of any campus and can be integrated with various systems.

Instant notifications of 911 calls from PBX devices AND cellular devices on your campus.

CONNECTED BUILDING FEATURES

- **Camera Integration** – Integrate existing IP-based camera systems currently used by the district. Dispatchers and on-site personnel can access live camera feeds from 911inform buildings during the emergency event. When the event is closed, all camera access is removed for all involved parties.
- **Door Controls** – Integrate existing door locks allowing for remote access capabilities for first responders and on-site personnel.
- **Strobe Lights** – Integrate emergency strobe lights with the ability to set different light patterns based on the emergency events.
- **Gun Shot Detection** – Monitor sensors that can detect the sound of a gunshot to initiate lockdown events. The 911inform notification will display the floor plan approximately displaying the area of where the gunshot originated.
