

| MEDICAL FACILITIES

Hospitals are accustomed to managing emergency situations, but what happens when someone dials 911 within your building? Often, it is difficult for first responders to locate the origin of a 9-1-1 caller. With 911inform, we build a digitized map of your building with the quickest access routes to a 9-1-1 callers' location, ensuring they get the help they need in a timely fashion.

Here are some key points on how you can integrate 911inform into your facility:

- Immediately alert all necessary security and medical teams on-site during any emergency using available devices within your facility.
- Pinpoint emergency locations on detailed floor plans from facility VoIP and cellular phones dialed anywhere on the property, inside or out.
- Access all security technology such as video surveillance and door access controls in real-time.
- Communicate and respond alongside other first responders.
- Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment.
- Utilize the internal communication system to keep your facilities teams up to date with real-time responses. Report who is on-site, clearly communicate the situation, and resolve emergencies quicker.

Integrate automated messages using paging systems, strobes and casting messages to any available device to instantly alert all employees of relevant emergencies.

A 911 call from a cell phone automatically triggers a notification and will display the exact location on the floor plan using geofencing technology.

Medical facilities know better than most the primary rule of any emergency. Time is the most important factor and seconds can often mean the difference between life and death. When emergency situations arise within your facility, your medical staff and security teams will be notified the second anyone places a 9-1-1 call or text within your building. Seconds matter in an emergency and with 911inform, we make those seconds count.

911inform is the complete toolkit for today's ever-changing technology in the E911 and security sector. Let us enhance your next approach in safety solutions.

Tiered User Access

Keep control of your facilities privacy by incorporating customized users. Each user can be assigned specific permissions that interacts with 911inform. The first responders tier will allow access to communicate with your employees, view floor plans and other security technology. After an event has been closed all access to these features will be removed from the users.

Other tiers can be divided into your employee hierarchy, limiting the capabilities on every level.

911inform is fully customizable to fit the functionality needs of any facility and can be integrated into various systems.
