

COMMERCIAL BUILDINGS

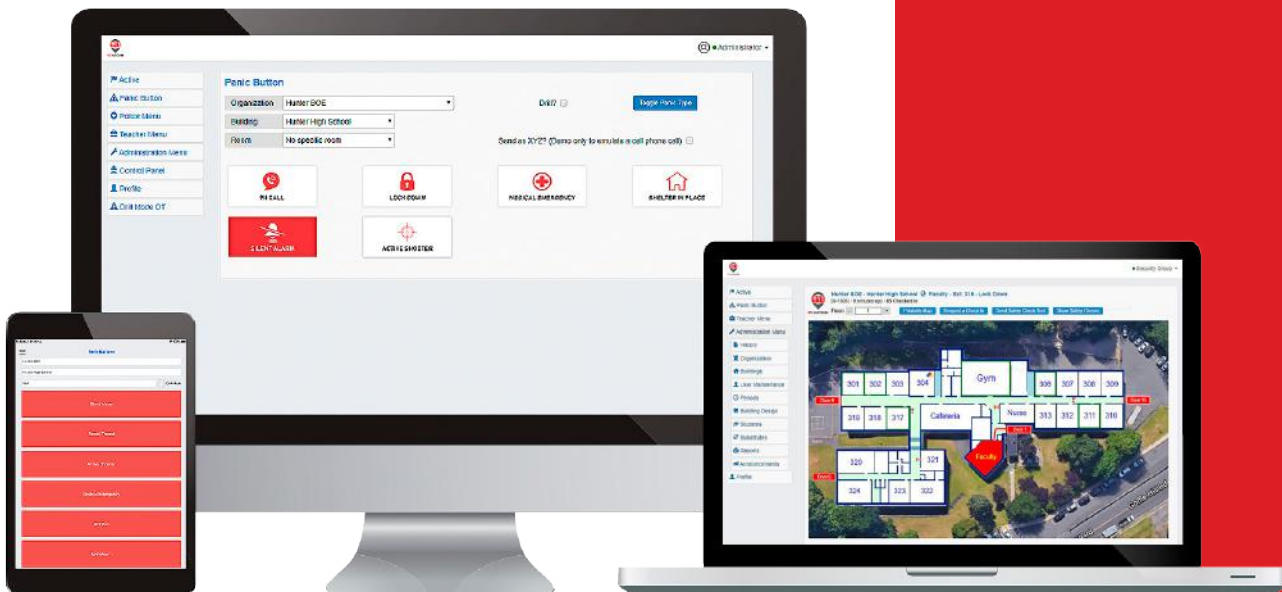

Monitoring multi-level buildings during an emergency could cause your employees more harm than good. With today's E911 capabilities first responders are given limited information for your property. Which means, if someone used a landline, they would get just the basic street address. If someone is using a mobile device on your premises, the closest cell tower location is pinged. This leaves a large amount of wasted time between calling 9-1-1 and the arrival of a first responder.

MAKE EVERY SECOND COUNT

From the moment a 9-1-1 call is placed a notification is instantly sent to your buildings tiered user lists, 9-1-1 dispatch, and police vehicles. The notification displays a detailed floor plan of the building, the location of the 911 caller, a direct route to their location and the ability to view security cameras and control doors for any designated users. 911inform provides these features free to your local PSAP, allowing first responders the tools needed to better assess, monitor, and resolve any emergency quickly and efficiently.

Integrate automated messages using paging systems, strobes and casting messages to any available device to instantly alert all employees of relevant emergencies.

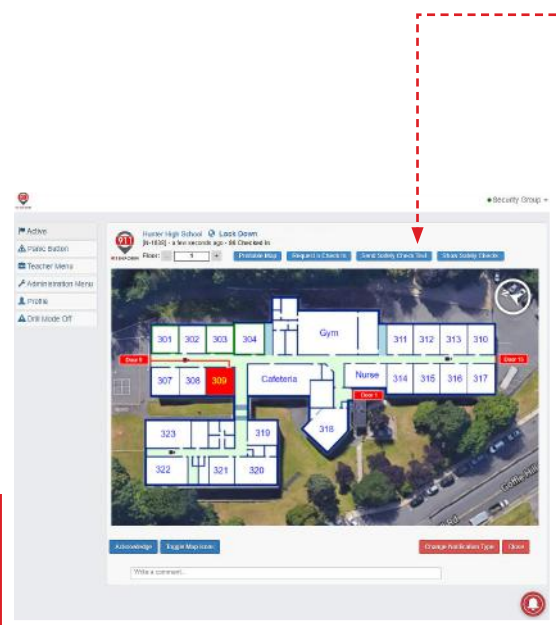

911inform is fully customizable to fit the functionality needs of any building and can be integrated into various systems.

EMERGENCIES **WON'T WAIT**

Here are a few ways you could integrate 911inform with your multi-level buildings:

- Immediately alert all necessary security and medical teams on-site during any emergency using available devices within your building.
- Pinpoint emergency locations on detailed floor plans from VoIP and cellular phones dialed anywhere on the property, inside or out.
- Access all security technology such as video surveillance and door access controls in real-time.
- Communicate and respond alongside first responders. 911inform is embedded in current 911 Call Centers systems.
- Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment.
- Utilize the internal communication system to keep your facilities on-site teams up to date with real-time responses. Clearly communicate the situation and resolve emergencies quicker.
- Personnel locations displayed on floor plan with missing personnel indicators.

Update for the future now. The 911inform solution takes your E911 to the next level. See for yourself at 911inform.com and request a demo.

A 911 call from a cell phone automatically triggers a notification and will display the exact location on the floor plan using geofencing technology.
