

# FULFILLMENT CENTERS

With large scale facilities you need to make every second count. Reaching every employee can be difficult due to certain factors and regulations you have implemented. 911inform can assist with these issues. Built around the need to quickly identify emergency locations and notify the required public safety teams in real-time, our platform ensures that every emergency can be more efficient and effectively managed.

## Here are some key points on how you can integrate 911inform into your facility:

Immediately alert all necessary security and medical teams on-site during any emergency using available devices within your facility.

Pinpoint emergency locations on detailed floor plans from facility VoIP and cellular phones dialed anywhere on the property, inside or out.

Access all security technology such as video surveillance and door access controls in real-time.

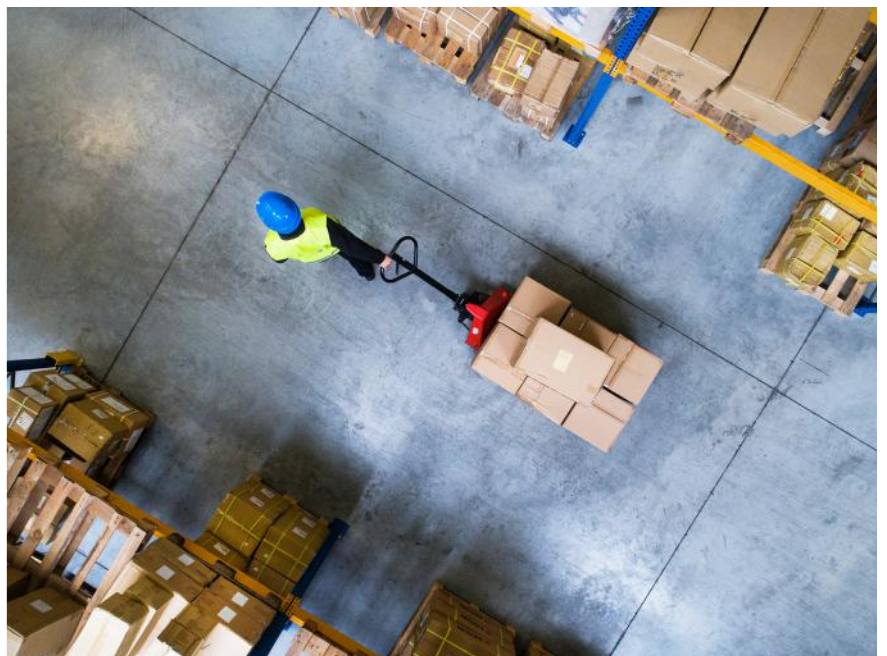

Communicate and respond alongside first responders. 911inform is embedded in current 911 Call Centers systems.

Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment.

Utilize the internal communication system to keep your facilities on-site teams up to date with real-time responses. Report who is on-site, clearly communicate the situation and resolve emergencies quicker.

**Integrate automated messages using paging systems, strobes and casting messages to any available device to instantly alert all employees of relevant emergencies.**

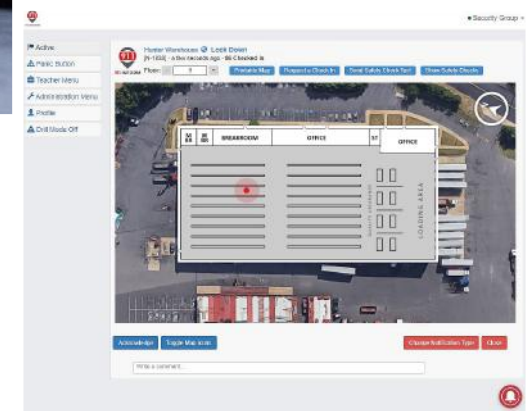

A 911 call from a cell phone automatically triggers a notification and will display the exact location on the floor plan using geofencing technology.

### Tiered User Access

Keep control of your facilities privacy by incorporating customized users. Each user can be assigned specific permissions that interacts with 911inform. The first responders tier will allow access to communicate with your employees, view floor plans and other security technology. After an event has been closed all access to these features will be removed from the users.

Other tiers can be divided into your employee hierarchy, limiting the capabilities on every level.

911inform is fully customizable to fit the functionality needs of any facility and can be integrated into various systems.
