HIGHER EDUCATION

College's and Universities are known to have some of the most sprawling educational campuses in the country. With 911inform, we geofence your entire campus location so that anyone who walks within your geo-grid and dials 911 from any smartphone device, will activate our software and alert your local PSAP as well as any public safety or security teams within your organization.

Here are some key points on how you can integrate 911inform into your campus:

Immediately alert all necessary security, medical teams, and administration during any emergency using available devices within your campus.

Pinpoint emergency locations on detailed floor plans from facility VoIP and cellular phones dialed anywhere on the property, inside or out.

Access all security technology such as video surveillance and door access controls.

Communicate and respond alongside first responders using our real-time comment section. 911inform is embedded in current 911 Call Centers systems replies immediately.

Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment and science labs.

Utilize the internal communication system to keep your campuses on-site teams up to date with real-time responses. Report who is on-site, clearly communicate the situation, and resolve emergencies quicker.

CONNECTED BUILDING CONTROLS
—

Video Controls: Integrate with your existing IP-based camera systems currently used within your organization. Public safety personnel both in the 911 Center and on-scene can access live video feeds from 911inform buildings during the emergency event. After the event is closed, video access is removed for all parties.

Voice Controls: Integrate with your existing intercom and PBX voice systems, enabling bi-directional communication into an emergency event for public safety personnel at the 911 center and on-scene responders.

Door Access Controls: Integrate with your existing door locks, allowing for remote door locking and unlocking capabilities for public safety personnel.

Strobe Controls: Emergency strobe light integration with the 911inform platform. Ability to set different light patterns based on the emergency at hand.
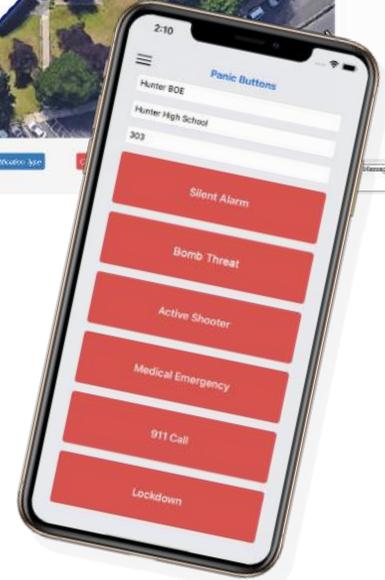

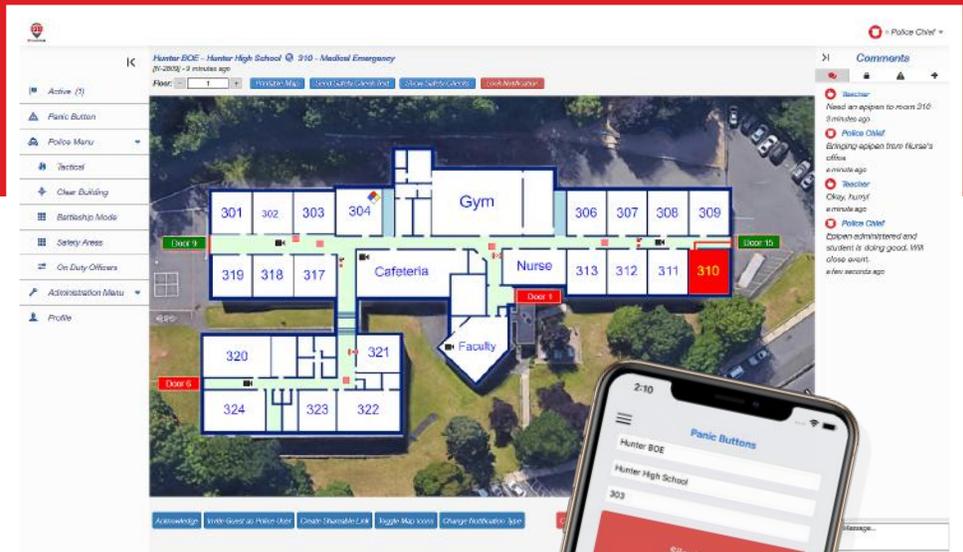

Gun Shot Detection: Monitor sensors that can detect the sound of a gunshot to initiate a notification. The 911inform floor plan will approximately display the area of where the gunshot originated.

Tiered User Access

Keep control of your facilities privacy by incorporating customized users. Each user can be assigned specific permissions that interacts with 911inform. The first responders tier will allow access to communicate with your employees, view floor plans and other security technology. After an event has been closed all access to these features will be removed from the users.

Other tiers can be divided into your employee hierarchy, limiting the capabilities on every level.
