HOSPITALITY INDUSTRY

WHY NG911?

MORE ACCURATE

Devices that register to the network provide a deeper level of forensics. This can include additional data points correlated based on relevance.

MORE EFFICIENT

NG911 removes the need for the record to be provisioned prior to the call, while reducing the overall number of records required to provide device level location.
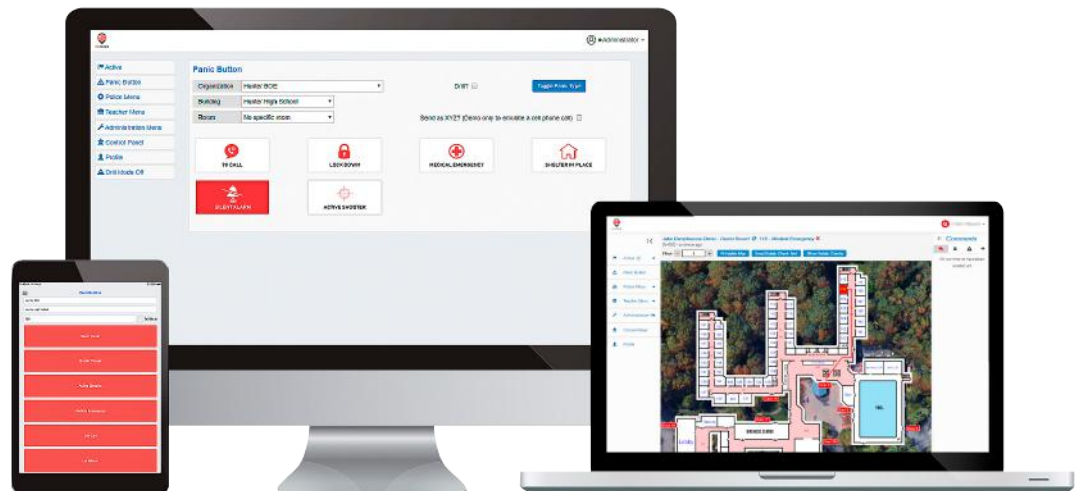

MORE INFORMATIVE

In addition to physical location, additional data provides a detailed operational picture locally, on-site, and to the PSAP. This provides RAY BAUM'S Act compliance and extends your organization's situational awareness with multi-media and bi-directional communications and control.

Today's E911 capabilities offers first responders limited information for communities. Most dispatchers only have the capability to see just a street address and if someone uses a mobile device on your premises, the closest cell tower location is pinged. This leaves a large amount of wasted time between calling 9-1-1 and the arrival of a first responder. Managing emergency calls from a hotel can be seemless with the 911inform solution. Using a geofence and our connected building tools we will be able to determine where a 9-1-1 call is placed for any floor, room, and parking lots.

MAKE EVERY SECOND COUNT

From the moment a 9-1-1 call is placed a notification is instantly sent to your buildings tiered user lists, 9-1-1 dispatch, and police vehicles. The notification displays a detailed floor plan of the building, the location of the 911 caller, a direct route to their location and the ability to view security cameras and control doors for any designated users. 911inform provides the features needed for your local PSAP, allowing first responders the tools needed to better assess, monitor, and resolve any emergency quickly and efficiently.

911inform is fully customizable to fit the functionality needs of any hotel and can be integrated into various systems.

**911 CALLING**   **MEDICAL EMERGENCY**   **CAMERA INTEGRATION**   **DOOR CONTROLS**   **GUN SHOT DETECTION**

Here's how 911inform can be integrated:

- MLTS Compliant- Alyssa's Law, Kari's Law, and RAY BAUM'S Act

- Immediately alert all necessary security and medical teams on-site during any emergency using available devices within your building.

- Geofence and Connected building events pinpoint emergency locations on detailed floor plans from VoIP and cellular phones dialed anywhere on the property,

- Access all security technology such as video surveillance and door access controls in real-time

- Communicate and respond alongside first responders. 911inform is embedded in current 911 Call Centers systems.

- Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment.

- Utilize the internal communication system to keep your facilities on-site teams up to date with real-time responses. Clearly communicate the situation and resolve emergencies quicker.

The only notification and security management platform that assists communication between local authorities and your organization.

EMERGENCIES WON'T WAIT

A 911 call from a cell phone automatically triggers a notification and will display the location on the floor plan using geofencing technology.
