

SPORTING & CONCERT VENUES

Security and safety management of large stadiums, arenas, or concert venues can be a daunting task to reach an emergency promptly. Navigating through rows of people adds precious seconds to any response time for your on-site staff. With today's E911 capabilities first responders are given limited information for your property. 911inform gives full situational awareness during and after an emergency event allowing all parties insight on where to go, the appropriate equipment needed, and formulate resolutions.

MAKE EVERY SECOND COUNT

From the moment a 9-1-1 call is placed a notification is instantly sent to the tiered user lists of your organization, 9-1-1 dispatch, and police vehicles. The notification displays a detailed floor plan of the building, the location of the 9-1-1 caller, a direct route to their location and the ability to view security cameras and control doors for designated users. 911inform provides these features free to your local PSAP, allowing first responders the tools needed to better assess, monitor, and resolve any emergency quickly and efficiently.

Integrate automated messages using paging systems, strobes and casting messages to any available device to instantly alert all employees of relevant emergencies.

911inform is **fully customizable** to fit the functionality needs of any organization and can be integrated into various systems.

Here are a few ways you could integrate 911inform with a stadium, arena, or concert venue:

- Immediately alert all necessary security and medical teams on-site during any emergency using available devices within the organization.
- Integrate any weapon detection technology. Weapon detection sensors identifying gunshots will send a signal to the 911inform server with details of the shot to create the notification sent to 911inform users.
- Pinpoint emergency locations on detailed floor plans from VoIP and cellular phones dialed anywhere on the property, inside or out.
- Access all security technology such as video surveillance and door access controls in real-time.
- Communicate and respond alongside first responders. 911inform is embedded in current 911 Call Center systems.
- Add the locations for emergency equipment (AEDs and fire extinguishers) and emergency shutoffs for equipment.
- Utilize the internal communication system to keep on-site teams up to date with real-time responses. Clearly communicate the situation and resolve emergencies quicker.
- Ability to invite guest users that are necessary for the current emergency event. As soon as the event is closed access is no longer granted to 911inform.
- Use the detailed history logs of past notifications to enhance your safety plans even further.

911inform is the complete toolkit for today's ever-changing technology in the E911 and security sector. Let us enhance your next approach in safety solutions.
